4. Biomedical waste management:

Microbiological Waste Management

During working in microbiology laboratory different types of waste are produced which should to be disposed. These may be chemical, biological, physical and bioremediation.

Microbiological Waste includes:

1. Discarded culture and stacks of infectious agents.
2. Discarded, used disposable culture dishes.
3. Disposable mask, latex gloves and disposables hair cap.
4. Sharps: Waste items that can easily cut or puncture the skin such are: Razor blades, disposable scissors used in surgery and scalpel blades.

Sharps include but are not limited to the following when contaminated.

1. Glass Pipettes.
2. Broken Glassware.
3. Specimen tubes.
4. Blood culture bottles and microscope slides.

For the disposal of sharp wastes we use specific colored container. The container should be leak proof and standard manufacture and labeled the container.

Disposal of Prepared media:

1. It is likely that inoculated culture media will contain high numbers of microorganisms which consists a potential hazard. Therefore they must be disposed off safely by approved method. Infected specimens and inoculated culture media should be handled by trained person only. Any apparatus used and contaminated must be safely disinfected or sterilized. It is suggested that decontamination should be carried out at 121⁰C for 60 minutes. After autoclaving, media may be disposed of through normal waste disposal.
2. For disinfection: Dip media for 1 to 2 Hrs in Lysol- 2.5% + Domex- 2.5% + Savlon 2.5% disinfectant and then discard through normal waste.

5. Waste recycling system

Regular maintenance and repairing of damage furniture desk bench, rack, equipment in various laboratories and departments is done. Biodegradable waste from life science laboratories and garden waste is transfer to vermi-composting unit which is again user as bio-fertilizer in garden.

3. Water conservation

1. Rain water harvesting

2. Bore well /Open well Recharge /Construction of Tanks and Bunds
